TECHNICAL SKILLS

Languages: Go, Java, Python, C++, TypeScript, Bash

Backend & APIs: REST APIs, Microservices, Echo, Gorilla Mux, Node.js, Express.js

Cloud & DevOps: AWS, Azure, GCP, Docker, Kubernetes, Terraform, Helm, GitHub Actions, CI/CD

Databases: MongoDB, PostgreSQL

Tools: Linux, Git, Prometheus, Grafana, ELK, Docker Compose

Security: Microsoft Security Operations, SIEM, Incident Response, Secure Coding

AI-Augmented Engineering: Prompt Engineering, LLM-Assisted Development, Workflow Automation

Practices: Agile, Code Review, Root Cause Analysis, Performance Optimization

CERTIFICATIONS

- Microsoft Certified: Security Operations Analyst Associate
- Simple Golang Projects – Udemy (Akhil Sharma)

EXPERIENCE

Associate Software Engineer

Nov 2024 – Present

Accenture Solutions Pvt Ltd

- Delivered backend enhancements and production fixes for enterprise-scale web content management platforms using **Java**, **REST APIs**, and Git workflows.
- Investigated and resolved **50+ production issues** across development, staging, and production environments through root-cause analysis and permanent corrective actions.
- Improved backend service performance by **20%** through API optimization, code refactoring, and data-flow improvements.
- Enhanced **CI/CD** workflows using Docker and GitHub Actions, reducing deployment turnaround time by **15–20%**.
- Maintained **99.9% system availability** through deployment support, monitoring, issue triaging, and incident resolution.
- Reduced MTTR by **30%** through observability improvements, proactive log analysis, and monitoring enhancements.
- Collaborated with QA teams, business stakeholders, and release managers to support critical enterprise releases across multiple environments.
- Leveraged AI-assisted development workflows for debugging, documentation, architecture exploration, and productivity improvements.

PROJECTS

Ash OS | **Stack:** Linux, Shell, Lua, GitHub Actions, Docker | GitHub

- Developed a lightweight Linux distribution optimized for older hardware with enhanced audio and performance.
- Achieved **66.7% lower storage usage** and **24% lower RAM consumption** compared to Fedora.
- Automated ISO build and release flow using **Docker** and **GitHub Actions**.

Website Nativefier | **Stack:** Go, Electron, Tailwind, Docker, Kubernetes, Terraform, Azure

- Built a Go-based tool that converts websites into native-like Electron apps.
- Deployed the tool using **Docker**, AKS, and **Terraform** with automated **CI/CD** via GitHub Actions.

Git Automation CLI | **Stack:** Go, Cobra, fsnotify, Git

- Built a Git repository monitoring tool capable of tracking branch creation, deletion, commits, merges, and repository activity in real time.
- Implemented filesystem event monitoring using fsnotify and Git metadata inspection through native Git commands.
- Developed persistent logging, colorized terminal output, and multi-repository monitoring capabilities.
- Designed for developer productivity, repository auditing, and engineering workflow automation.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

SRM University Sonepat, Haryana

Graduated

CGPA: 7.72
